

# Clarification questions

External signals × workforce retention · Asteria Consumer Products · Youssef Alsaeed · 28 September 2026

Three questions about metric definitions that could change whether an objective is reported as met. For each one I note the assumption I will proceed with if an answer is not available. Other ambiguities in the starter data are low-impact and are handled as documented assumptions in the submission.

1

## SENIOR\_HIRE\_12M

### Which career levels count as senior hires?

The objective's scope is "Senior hires". Should this include **Senior Leader** only, or **Manager** as well? The file also contains 10 records with the career level "**Sr Mgmt**", which does not match the other labels. Should these be treated as Senior Leader?

#### IF NO ANSWER, I WILL ASSUME

Senior Leader qualifies, with "Sr Mgmt" treated as the same level. Manager is excluded. I will also show the result with Manager included, for comparison.

2

## NEW\_HIRE\_6M · SENIOR\_HIRE\_12M

### Which hires are in scope, and how should immature cohorts be handled?

The objectives are effective from 2021-01-01, but 414 records were hired in 2020. Should the hire-based objectives cover **only hires from 2021 onward**? And is it acceptable to group hires into **monthly cohorts** and report only cohorts whose full six- or twelve-month window has elapsed by the 2025-12-31 as-of date?

#### IF NO ANSWER, I WILL ASSUME

Monthly hire cohorts from January 2021. Only mature cohorts are reported; recent cohorts are shown as pending. 2020 hires are excluded from cohorts but still counted as part of the workforce.

3

## REGRETTED\_TURNOVER\_12M

### Which average-headcount convention should the regretted turnover rate use?

Should the denominator be the **mean of the twelve month-end headcounts** in the trailing window, or the **average of opening and closing headcount**? The choice could determine whether the rate falls above or below the 7.5% target.

#### IF NO ANSWER, I WILL ASSUME

Mean of the twelve month-end headcounts. The numerator is voluntary exits flagged as regretted within the same window.
